## Typical School Intercom System

Many schools require two-way internal communication between administrative offices and classrooms. Most classrooms include a telephone set and a talkback speaker.

Administrative offices can broadcast live messages or announcements to groups of speakers or to all speakers simultaneously (all call). Additionally, the administrative offices can dial each classroom independently and the teacher can reply via a talkback speaker.

**PagePac Plus Controllers** provide multiple capabilities to accommodate communication needs of schools. The Controller offers many features such as class bells, paging override for priority announcements, flexible zone numbering, alert tones, door control/access and programmable zone groups. **PagePac Plus Zone Expansion Units** provide 16 additional zones per unit. Up to 3 units can be added for up to 56 zones per system.

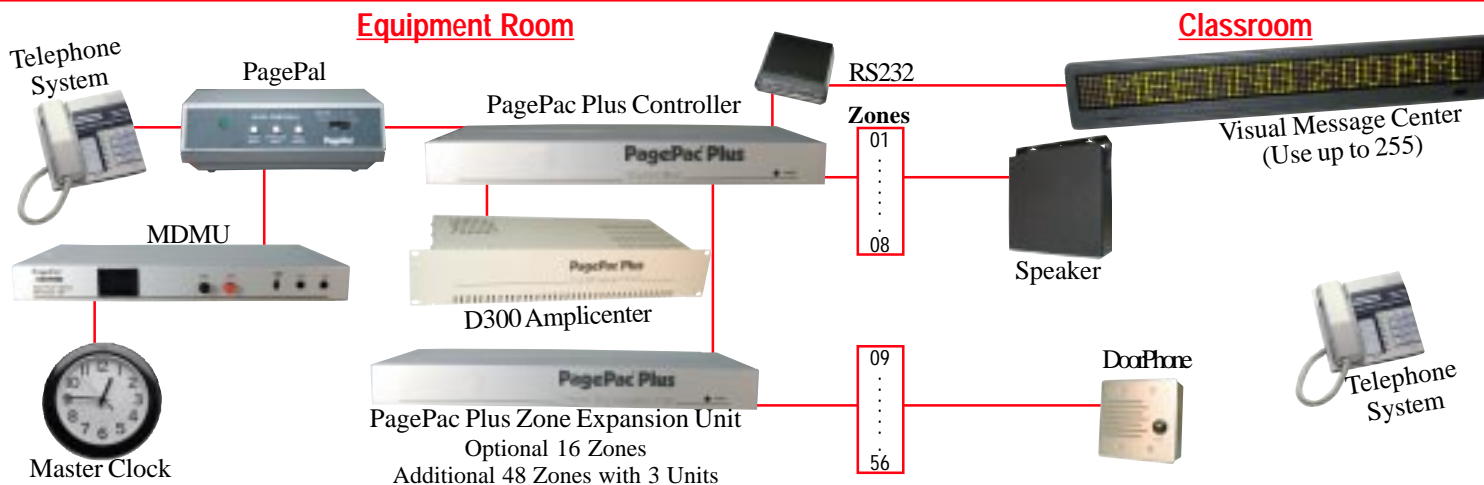

For enhanced capabilities, school systems may include:

### Multiple Digital Messaging Unit (MDMU)

- Easily broadcast pre-recorded standard messages
- Preprogrammed and prescheduled messages delivered to specific locations at specific schedules

### Visual Message Centers

- Display visual messages for the hearing impaired (up to 255 Visual Message Centers can operate on one PagePac Plus Controller)
- Multiple controllers will expand system to as many classrooms as desired
