

Digital Voice Announcer Call Stacker

PagePac® Digital Voice Announcer Call Stacker is a microprocessor based audio recording and announcement system. The Call Stacker is used in conjunction with the PagePac Plus Controller to provide buffered announcement play to the paging system. The call stacker accepts up to 5 simultaneous pages, stores them, and plays them back in sequence.

Features & Advantages

Message Override

Emergency messages can interrupt play back sequence (interrupted message will replay in full once the emergency message has completed).
